Education

BMSZC Petrik Lajos Két tanítási Nyelvű Technikum
Software developer and tester
2022 - 2023

BMSZC Újpesti Két Tanítási Nyelvű Műszaki Technikum
Computer Network Maintenance
2017 - 2022

Skills

- Svelte
- React
- NestJs
- Javascript
- Typescript
- NodeJs
- Git

Experience

CodeArc   *2024 – Present*
Personal project

A platform designed for developers to manage teams and projects efficiently. It includes features like a database planner, Kanban boards, AI-powered tools, and performance monitoring to streamline development workflows. Still working on the user experience and the backend.

CinemaView   *2023 – 2023*
School exam

We developed this app for our school exam. We had to design an app that solves a real-world problem. Our team member worked at a cinema, and the main issue was that employees had to manually schedule their shifts. We thought of a solution where employees could select shifts themselves based on their availability and the options that the manager posted. We had 3 months to develop this app, focusing on making it user-friendly and intuitive. I was responsible for the frontend development. This was my first experience working with a team on a real project, which proved to be incredibly valuable. Additionally, we implemented a cinema ticket booking system.
